

MICROFIBER SELECTION GUIDE

COMPREHENSIVE MICROFIBER SOLUTIONS

Rubbermaid Commercial Products offers high-quality and high-efficacy microfiber products that provide effective cleaning performance in any facility.

MICROFIBER EDUCATION

The science behind the power of microfiber and what sets Rubbermaid Commercial Products apart.

Pages 4-15

SURFACE CLEANING

A comprehensive selection of durable and disposable cloths for any type of facility need.

Pages 16-23

FLOOR CLEANING

A portfolio of mopping tools and accessories that drive productivity while helping to maintain a high level of clean.

Pages 24-49

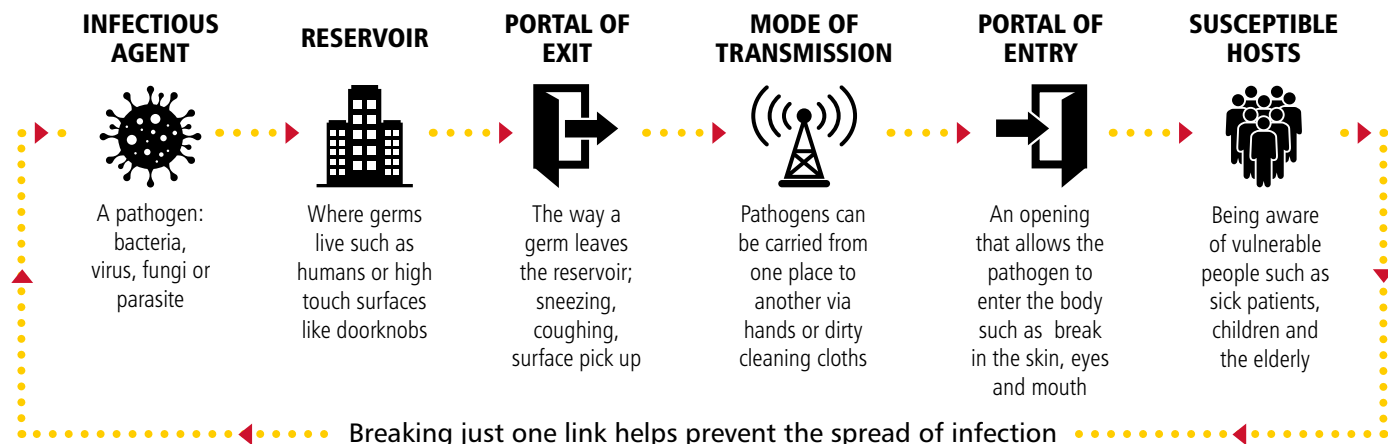

PRODUCT CARE

Laundrying instructions to ensure proper care of microfiber.

Pages 50-51

BREAKING THE CHAIN OF INFECTION

Understanding, and then breaking the chain of infection is critical to helping stop the spread of germs and bacteria.

THE AVERAGE DESK HAS
400x
MORE GERMS THAN A TOILET SEAT¹

AVERAGE LIFE EXPECTANCY IS
UP TO 48 HOURS
FOR RESPIRATORY VIRUSES ON SURFACES²

OVER 90% OF AIRBORNE MICROORGANISMS
IN BUILDINGS ARE DUE TO
RESUSPENSION FROM FLOORS & OTHER SURFACES³

¹The Independent, "Average desk contains 400x more germs than a toilet seat, new research reveals" | ²CollegeStats.org, "Bacteria on Campus" | ³ISSA/CIRI COVID-19 Symposium

HEALTH AND WELLNESS

Help improve cleaning efficacy by removing 99.7% or more of tested pathogens with water only¹.

PRODUCTIVITY

Combine multiple steps with cleaning tools that have been proven to decrease task time and reduce user effort.

SUSTAINABILITY

Have a positive impact on the environment by reducing water and chemical consumption by up to 95%.²

COST IN USE

High-quality microfiber construction is proven to last up to 500 commercial launderings, and up to 200 launderings with bleach.

IMAGE

The highest quality fibers ensure that surfaces dry quickly without streaks or smudges.

A LEGACY OF INNOVATION

We lead the industry in durability across the entire microfiber portfolio, delivering the highest cleaning efficacy and high cost-in-use value for any facilities' cleaning needs.

¹Based on third-party testing on VCT surface with water only | EPA Est. No 92100-CHN-1

UNDERSTANDING MICROFIBER

At its most basic, the term “microfiber” refers to a micro, or small, fiber made up of synthetic materials such as polyester, nylon, or a combination of the two fibers.

The individual microfibers are knit together to form cleaning tools that are able to trap microscopic particles and liquids within the intricate network of small fibers far more efficiently than larger fibers.

[View our white paper, “Defining Microfiber: The HYGEN Difference”](#)

Unable to be seen by the eye, **one fiber measures less than one denier**, the measurement for the linear weight or mass density of fibers.

HOW SMALL IS ONE STRAND OF MICROFIBER?

Images below are magnified to demonstrate size comparisons.

HOW IS MICROFIBER MADE?

All microfiber begins with extrusion, which is the process of the shaping of a substance by forcing it through a mold.

HOW DOES MICROFIBER WORK?

MICROSCOPIC FIBERS
Fibers trap microscopic particles, microbes, and liquids far more effectively than larger fibers by penetrating into the tiny grooves and crevices on a surface.

STATIC CHARGE
Most dust, dirt and bacteria have a negative charge and are naturally attracted to the positive static charge of the microfiber

VS.

COTTON FIBERS
Cotton fibers are too large to fit into the tiny grooves and crevices, pushing around particles but not picking them up.

WHAT'S THE DIFFERENCE

Synthetic polymers are what provide microfiber with some of its defining features, but how many times the fiber is split determines its cleaning performance.

COTTON

Cotton fibers are too large to clean in crevices where bacteria, spores, and viruses hide.

MONOFILAMENT MICROFIBER

Monofilament fibers are about half the size of cotton and effectively clean in crevices where bacteria, spores, and viruses hide.

SPLIT-BLENDED MICROFIBER

Split-blended microfiber has the smallest fiber size which further increases the surface area of the cloth for a superior clean.

CLEAN, THEN DISINFECT

The CDC specifically states that “cleaning is the necessary first step in any sterilization or disinfection process”¹ given that disinfectants work most efficiently when they come into direct contact with the microorganisms they are trying to kill¹.

View our White Paper, “Two-Steps for a Reason: the Case for Cleaning Prior to Disinfection”

The physical action of scrubbing removes substantial numbers of microorganisms.¹

When microorganisms are trapped in dirt, that direct contact with disinfectants can't occur.^{1,2}

Microfibers have sharp edges that remove microbes from surfaces “like a carpenter’s plane, peeling off surface deposits.”³ that can be missed by disinfectants.

TYPES OF MICROFIBER CLOTHS & PADS

Selecting the best microfiber product for a facility will depend on laundering capabilities, cleaning processes and the surfaces that need to be cleaned.

DURABLE MICROFIBER

Use a launderable microfiber cloth for routine cleaning, color-coded cleaning, and if commercial laundering is available.

DISPOSABLE MICROFIBER

Single-use microfiber is best used in high-risk or high-touch areas, or if laundering is not available.

SPECIALTY MICROFIBER

Specialty microfiber is designed for specific uses like glass and mirror cleaning, dry dusting, or heavy duty scrubbing for tile and grout.

⁵National Institute ofTechnology, P.O. Box 2608, St. Hanshaugen, N-0131 Oslo, Norway

⁶National Institute ofOccupational Health, LersH Parkalle 105, DK-2100 Copenhagen, Denmark Received 25 May 2001; received in revised form 18 August 2001; accepted 3 December 2001

⁷San Francisco Department of the Environment. Safer Practices and Products for Disinfecting and Sanitizing Surfaces. https://sfenvironment.org/sites/default/files/liers/files/sfe_th_safer_products_and_practices_for_disinfecting.pdf

One-step cleaner-disinfectants are tested with the U.S. EPA in the presence of only 5% organic matter on surface. However, if a surface exceeds that level, the product will no longer be effective.⁴

NOT ALL MICROFIBER IS CREATED EQUAL

Studies published in peer-reviewed literature have demonstrated significant variability among different microfiber products in terms of absorbency, cleaning efficacy, and microbial removal.

GRAMS PER SQUARE METER (GSM)

A measurement of the weight of a fabric. Higher GSM fabrics are typically thicker, more absorbent, and more durable than lower GSM fabrics.

KNITTING PATTERNS

Knitting patterns impact the overall look and feel of a product and can affect durability, performance, and intended use of the product.¹

LAUNDERING PERFORMANCE

Products that can withstand the CDC guidelines of using hot water and bleach are more effectively cleaned during laundering to help prevent cross-contamination and re-contamination of surfaces.

REMOVAL OF HARMFUL PATHOGENS

Third party testing from an accredited laboratory is a critical step to help ensure products have been confirmed to remove harmful pathogens.

QUAT BINDING

Quat binding occurs when the common class of disinfectant, quaternary ammonium compounds, binds to product fibers. Quat binding occurs with all split-blended microfiber due to the nylon content, but the binding is significantly less than traditional products made with cotton. Polyester fibers do not bind with quat.

COMPOSITION

SPLIT-BLENDED MICROFIBER

The percentage of strands successfully split during the splitting process is critical to cleaning performance. Splitting creates 16 separate fibers which increases the surface area to optimize the capture of debris and microbes and absorption of liquids.

MONOFILAMENT MICROFIBER

While no splitting occurs in monofilament microfiber, it still provides better cleaning performance than cotton. Monofilament microfiber made of 100% polyester is quat safe and often used in disposable products.

¹Smith DL, Gillanders S, Holah JT, Gush C. Assessing the efficacy of different microfibre cloths at removing surface micro-organisms associated with healthcare-associated infections. J Hosp Infect 2011; 78(3): 182-6.

HYGEN™ DURABLE MICROFIBER

Premium, 16-split blended microfiber that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 20

HYGEN™ DISPOSABLE MICROFIBER

Single-use microfiber that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 21

LIGHT COMMERCIAL MICROFIBER

A versatile cleaning cloth for everyday use that has been proven to remove 99.7% or more of tested bacteria¹ with water only.

P. 22

SURFACE CARE

Viruses, such as influenza, can survive on surfaces and infect a person for up to 48 hours², making it important to clean high-touch surfaces such as doors, tables, light switches, and railings on a daily basis.

¹Based on third-party testing on VCT surface with water only | EPA Est. No 92100-CHN-1
Tested virus: Feline Calicivirus | Tested Bacteria: Clostridioides difficile (C. diff), Methicillin-resistant Staphylococcus aureus (MRSA), Pseudomonas aeruginosa

²CollegeStats.org, "Bacteria on Campus"

SURFACE CARE 101

The Association for Healthcare Environment (AHE) recommends the below best practices to help with optimal environmental cleaning and disinfection.

1 Clean from the cleanest surfaces in the room to the dirtiest

2 Clean from the top of the room to the bottom so that microbes and dirt fall to the ground

3 Wipe in one direction as it helps ensure solution is applied to the entire surface, and areas are not re-contaminated

4 Clean from the outside walls of the room to the center of the room

MAXIMIZE SURFACE CLEANING

The eight-sided fold methodology for microfiber cloths helps maximize surface cleaning, while minimizing the risk of spreading dirt and debris across multiple surfaces.

BEGIN with open, clean Microfiber cloth

FOLD Microfiber cloth in half

FOLD Microfiber cloth in quarters

CLEAN surfaces with two exposed sides of cloth

OPEN Microfiber cloth once to change sides

REFOLD to expose two fresh cleaning sides

OPEN cloth fully once four sides have been used

REPEAT steps 2 through 7 to use all eight sides

COLOR CODING

Color is also a visually effective way to prevent cross-contamination.

The below colors are commonly used within different areas of a facility per industry guidelines.

- A** Specialty Areas
- B** General Use
- C** Bathroom
- D** High-Risk Areas

FLOOR CARE

Over 90% of airborne microorganisms in buildings are due to resuspension from floors and other surfaces¹ making floor cleaning important not only to remove dust, dirt, and debris, but to disinfect the surface where germs are commonly spread throughout a facility.

HYGEN™ AND LIGHT COMMERCIAL MICROFIBER MOP PADS

Proven to remove 99.7% or more of tested pathogens² and are available in both durable and single-use pads for a variety of applications.

P. 28-31

NEW!

ADAPTABLE FLAT MOP SYSTEM

Wringable mop pads and frame for microfiber mopping in large spaces with existing equipment and accessories.

P. 34-37

SPRAY MOPS

A mopping system for quick-clean ups that also covers more square feet in less time than traditional mopping.

P. 38-39

HYGEN™ CHARGING BUCKETS

Designed for room-to-room cleaning, especially within Healthcare, and helps prevent the oversaturation of the mops.

P. 40-41

FLOOR FINISHING SYSTEM

Ensure that floors are protected from damage and maintain their shine.

P. 44-45

FLOOR CARE 101

When cleaning floor surfaces, the 'figure 8' motion is recommended to prevent cross-contamination and keep track of dirty and already cleaned surface.

FLOOR CARE PROCESS

Using the right process when cleaning floors helps prevent cross-contamination throughout a facility and protects floors from damage.

- 1 Check the floor for debris and use a scraper if needed before beginning.
- 2 Use microfiber dust pad and begin dust mopping from the entrance door working backwards. Dust mopping is important to maintain floor finish and shine.
- 3 Place wet floor sign on ground to alert patrons of wet floors, and to help prevent slips and falls.
- 4 Use microfiber mop pad with floor cleaning solution as recommended per chemical specified guidelines.
- 5 Begin mopping at the opposite end of the door or furthest point in room, and use a "Figure 8" motion.

COLOR CODING

Using the same color mop pads as cloths helps to create a consistent approach in avoiding cross contamination.

ANATOMY OF A WET PAD

HYGEN™ Microfiber Wet Mop Pads are constructed of premium 16-split nylon/polyester blend microfiber that provides high-efficacy wet mopping performance.

FGQ41000BL00

FACE MATERIAL

- Split microfiber is tested to remove 99.7% of tested virus and bacteria with water only.*
- Optimized material construction helps clean effectively while allowing the mop pad to glide across floors.
- Bleach resistant to ensure mops can be effectively laundered to help reduce the risk of cross-contamination.

INNER LAYERS

- Absorbent inner layers help hold enough solution to clean up to 250 sq feet.

BACKING

- Industry-leading durable backing secures mop to frame to keep mop pad in place while mopping.
- Withstands chlorine bleach and extreme heat for superior durability ensuring pad securely attaches to frame throughout the product's life.

EDGE TAPE

- Durable edge helps retain mop shape with use over time.

WHERE TO USE

ADAPTABLE MOP WITH MOP BUCKET	SPRAY MOPS (PULSE & LIGHT COMMERCIAL)	CHARGING BUCKETS FOR PADS
Heavy duty cleaning large areas Rinse/wring with mop bucket	Light duty cleaning smaller areas Touch-up/quick cleaning spill clean-up (no bucket required)	High-risk areas to reduce cross-contamination

HYGEN™ PULSE CADDY

HYGEN™ CHARGING BUCKET

The Charging Bucket charges the microfiber mop pads with cleaning chemicals and is designed to prevent oversaturation. It is compatible with HYGEN microfiber mop pads and the HYGEN Quick-Connect tools.

ADD water and/or cleaning solution to the Charging Bucket. The bucket design features an internal measuring guide to prevent oversaturation

PLACE damp mops in the Charging Bucket with the logo-imprinted side of the mops facing upward. Each bucket holds 20 damp mops

SECURE leak-proof lid to the Charging Bucket by snapping the end and side tabs into place

FLIP the Charging Bucket upside down and leave it upside-down for 5-10 minutes. The mops are now ready to use.

Designed to fit RCP Cleaning Carts.

REDUCE CROSS-CONTAMINATION

- All-plastic separable bucket holds 10-20 microfiber wet mop pads and 50 disposable pads
- Each mop holds enough liquid to clean up to 250 sq. ft.

NO.	DESCRIPTION	COLOR	L X W X H	PACK QTY
FGQ80000WH00	Microfiber Finish Pad	White	18" x 5.5" x 0.5"	6

FGQ80000

Resealable Finish Bucket keeps finish fresh until the next job, saving clean-up time

Microfiber Finish Pads are designed with split microfiber for the smoothest finish application

Delivers 200-300 sq ft of coverage with a single mop load of finish solution

PRODUCT CARE

Please reference CDC guidelines for laundering and cleaning microfiber cloths and pads as it is essential to ensuring the life span and efficacy of the fibers.

GETTING STARTED:

-  **CLEAN** the laundry machines daily, before the first use.
-  **SEPARATE** Microfiber cloths and mops from other textiles.
-  **WASH** Microfiber cloths and mops in the Mesh Laundry Net to manage inventory.
-  **DETERMINE** detergent and maximum load size using chart below.*

DETERGENT AND LOAD SIZE BY MACHINE

WASHER SIZE	MAX VOLUME	DETERGENT LOAD**	18" MOPS PER LOAD
60 lbs	71.8 gal	1.5 oz	130
81.6 lbs	97.8 gal	2.0 oz	175
101.4 lbs	121.3 gal	2.5 oz	220
125 lbs	150.6 gal	3.1 oz	270
141.4 lbs	169.6 gal	3.5 oz	305
174.8 lbs	201 gal	4.5 oz	375

LAUNDRY INSTRUCTIONS

COMMERCIAL WASHING: HOT WATER METHOD

- Wash in hot water (160°F/71°C) for 25 minutes¹
- Use Detergent and Load Size By Machine Guide to select appropriate capacity setting
- Use bleach if necessary

COMMERCIAL WASHING: COLD WATER METHOD

- Wash in cold water
- Use Detergent and Load Size By Machine Guide to select appropriate capacity setting
- Bleach is required at 50-150ppm²

COMMERCIAL DRYING

- Dry cloths and mops on low heat (130°F/54°C) setting
- Store dry cloths and mops in clean Rubbermaid Cube Truck

REQUIRED CARE

- Do not store cloths and mops in a washing machine overnight
- Do not use fabric softener in the wash cycle
- Do not use dryer sheets in the dry cycle
- Do not wash cloths and mops with other textiles

TRANSPORTATION

CONTAMINATED TEXTILES

- Don Personal Protective Equipment (PPE) before transferring soiled textiles into laundry machine
- Handle contaminated textiles carefully to avoid agitation
- Sort soiled microfiber from other textiles at the point of contamination using the Mesh Laundry Net
- Transport soiled textiles to the laundry with black Cube Truck with Cover

CLEAN TEXTILES

- Remove dry textiles from the dryer immediately
- Transport clean textiles in a properly cleaned blue Cube Truck with Cover or X-Cart with Cover
- Store clean textiles for only short periods of time. Wrap clean textiles for long-term storage
- Distribute textiles back into facility

OR

*Machine settings can be established by chemical provider.

**Represents 1/2 the average manufacturer's detergent recommendation. Using full amount of detergent can result in hazy floors.

Always follow the protocol as directed by your facility manager.

¹Per CDC Guidelines for healthcare facilities.

²Follow manufacturer instructions for bleach use.
